PROFESSIONAL EXPERIENCE

Ant Venture

Abu Dubai , UAE

AI Engineer

2026 May-Present

- Built an **AI-powered WhatsApp task management** platform called **Orbita** with mobile and web apps, where intelligent agents help convert conversations into structured tasks, reminders, follow-ups, and team workflows. The system enables users to manage work directly from WhatsApp while syncing tasks, updates, and collaboration across Orbita Messenger mobile and web interfaces with active live users in production.
- Currently working on project **Rahma**, a secure emergency-care and assisted-response platform for the **Department of Healthcare and Emergency Response, Abu Dubai Emirate**, designed to support elderly residents and People of Determination through SOS activation, location sharing, medical profile capture, caregiver alerts, and responder dashboard handoff. The project will use a modern web/mobile architecture with backend emergency-event services, push/SMS fallback, bilingual Arabic-English support, and security controls such as encrypted data storage, role-based access, audit logs, minimal sensitive-data sharing, secure hosting, backups, and data-retention policies. .
- Built an **AI-powered bill validation** web application for Care & Cure Diagnostics using Next.js, TypeScript, OpenAI, MongoDB, and AWS S3. The system parses uploaded PDF bills, compares them against rate-card rules, detects missing charges, pricing errors, unknown items, and math issues, then generates a corrected bill view with clear explanations, staff scoring, usage tracking, and admin dashboards for rate-card and instruction management.

TGH Technologies

Kochi, Kerala

SDE 2

2025 September-2026 May

- Engineered and integrated multiple AI models to enhance video generation through frame-by-frame synthesis. Developed an automated polygonal masking tool that achieved higher precision and efficiency than Meta's SAM2 with reduced data dependency.
- Built production-ready systems using Next.js, Supabase (Edge Functions & APIs), Grounding DINO, liveblocks for realtime collaborative sync , React Flow, implemented SQS- DLQ based highly scalable queue system that triggers lambda function for scaling a cpu intensive video compilation process. Implemented a custom snapshot + index-based undo-redo architecture enabling real-time collaborative editing in React Flow. Familiar with deployment in Railway .
- Implemented working in solo, a completely working web based video editor from an open source project end to end with scalability and made to production with live users with close to little dependency on main thread (remotion) with maximum leverage using agentic workflow to minimize the prd to production timing.

FRONTEND DEVELOPER (full time from May 10th 2024)

2024 January-2025 August

- Worked with a multi-disciplinary team and in solo to design, develop, and launch of multiple projects ; prioritized and resolved many new features and bug fixes and handled multi-level form handling.
- Tech-stack : Nextjs, React, Typescript, Framer-motion(animation), TailwindCss, Firebase, Authentication flows(forgot and email base reset-password) , Appwrite-cloud

REACT JS INTERN

SEPTEMBER 2023

EDUCATION

ARAVINDA VIDYA MANDIR

CLASS 12 (CBSE)

Pallicathodu, Kottayam, Kerala

2016-2018

RAJIV GANDHI INSTITUTE OF SCIENCE AND TECHNOLOGY

Bachelor of Engineering, Computer Science and Engineering

Kottayam, Kerala

2018-2022

TECH STACK AND SKILLS

HTML5, CSS, Javascript, Reactjs, Typescript, Nextjs, App router, page router , ssr, Tailwindcss, React/Tanstack-query, Redux Toolkit, Vercel, Figma, socket.io integrations, git , github, Appwrite ,Firebase (O-auth), wordpress-acf, storyblok-react, Framer Motion, railway, AWS Lambda , SQS , DLQ, Remotion, ffmpeg, Supabase , Edge function .

MAJOR CONTRIBUTIONS

Infinite Studios Marketplace(A social media platform for ai content creators and brand collaborations)

Infinite Product swap (An ai tool to swap products from a product ad video to create multiple variants ads from a single original video)

Infinite Nexus (A figma like realtime collaborative users interface for ai assisted film making , will multiple ai video models ,version history, movie scene management , realtime collaborative editing with different set of permission levels).

Implemented a complete video editor from an open source project , with added features like ai voice changing using eleven labs, all basic video editing feature , adding animations , transition between clips , auto generating captions using open ai whisper, adding and editing captions/text overlays in videos and a scalable sqs-dql->consumer worker->lambda/remotion based exporting flow which can get scaled without any performance issues

Majorly contributed to a patent pending feature to automate generating long duration videos using best ai models available in the market , stitching multiple videos together and the core part is maintaining temporal consistency between the short videos generated to form the long duration final outs

Teledesk (Telegram integrated task management system)

The Job Applicant Perspective (job posting website with HR and admin interfaces)

Omnipacs (A patient records management system for Omni-router)

Meeval (Cancer patients records/prescription management system)

Fintalent (Job posting and hiring status management system)

OPEN SOURCE CONTRIBUTIONS

[react-richtext-editor-package](#)(A rich text editor with average 70+ weekly downloads)
